

# FMS Forest Motorized System / Shuttle

Forest SHUTTLE Motor Technology is now available made to measure by JACKSON.

The Forest SHUTTLE motors can be operated in three ways:

- Wall switch
- Multi channel RF remote with timer
- Touch Impulse Technology - This technology allows you to open or close the drapes with a gentle pull. Just gently pull the drapes in the direction you want and the motor does the rest.

In case of a power failure, the drapes can be moved manually with no harm to the motor. The multi-channel remote has a range of approximately 30 meters and can operate several motors in unison using channel 00, or separately by using channels 1-15. The Forest SHUTTLE offers a very quiet operation with a speed of 15cm per second.

The Forest SHUTTLE has a 24 volt DC motor with 115 volt A/C power adapter. There is no need for an electrician if a wall outlet is available. The maximum length allowed is 5.8 meters (228"). The rated maximum weight is 10kgs. per meter of track (approx. 7 lbs. per foot) for standard pinch pleat style drapes. The Forest SHUTTLE offers a 10 year warranty!

## Suggested Retail Pricing
