

Pulse™ Drapery System

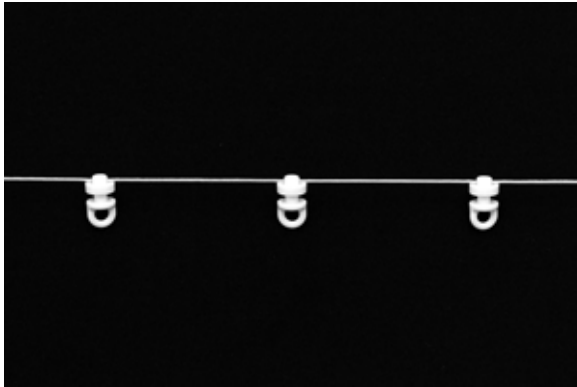

Snap out of it. Upgrade from snap tape style drapes to the Pulse Drapery System.

The Pulse System eliminates several of the most common complaints with snap tape draperies.

1. Drapes are hard to snap on and snap off. The Pulse system uses easy to install shirring hooks instead of snaps. They are as easy to install as pin on hook draperies.
2. Snap tape carriers break when removing the drapes. Extra care is always needed when removing a snap tape drape to avoid any carrier breakage. In Hotels this has been an issue as staff and guests are not always as careful as they should be. The two piece snap tape carrier helps to reduce this problem for snap tape drapes but the two piece carrier is more expensive than the one piece. The Pulse System has a low carrier cost and helps to eliminate any breakage issues.
3. Drapes have to be trimmed to an exact width often wasting fabric or having seams in places you do not want them. Instead of using a snap tape with fixed snap spacing of 4.25", the pulse system uses a specially designed tape and shirring hooks. Hooks can be placed at whatever spacing you want. You can fabricate your drapes at different flat widths and still make them fit your rod. E.g. If you have a snap tape rod with 14 carriers you would have to fabricate your flat panel at approximately 61.75" (depending on overlaps and returns). This is wider than most fabrics and would result in using 2 widths of fabric, wasting the majority of the second one. Using Pulse you can easily use one width of fabric with 14 hooks eliminating waste and eliminating a seam right near the edge of the drape. Always fabricate your rod first to determine the amount of shirring hooks required.

Pulse Carriers fit KS, CRS, CS, H J1000, H J1001 and H J2000 tracks.

Pulse™ Drapery System

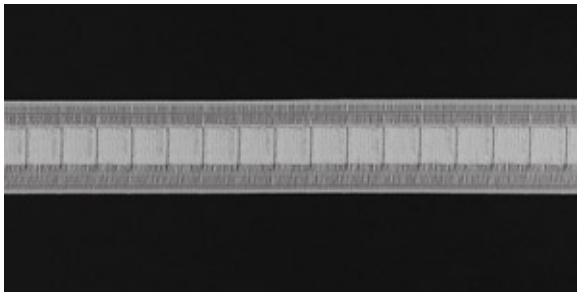

Pulse Joined Carrier

Fits ks, crs, cs, h j1000, h j1001 and h j2000

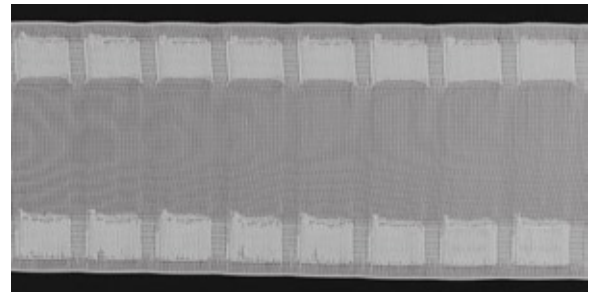

H J1010-060 2 5/8" spacing
